

## **2014 Evaluation of Weed Management Systems in Field Corn in Rochester, MN.**

Breitenbach, Fritz, R., Lisa M. Behnken, Jeffrey R. Gunsolus, Thomas Hoverstad, Aly Ries and Amber M. Lee

The objective of this trial was to evaluate the performance of herbicide programs for weed control in field corn in southeastern Minnesota. The research site was a Lawler loam series with a pH of 6.6, O.M. of 2.4%, and soil test P and K levels of 39 ppm and 113 ppm, respectively. Spring fertilizer was broadcast on April 28, 2014 ahead of planting at a rate of 119-18-149-24 (N-P-K-S). The field was spring, disked and field cultivated once prior to planting. The previous crop was soybean. The corn hybrid, DeKalb DKC44-13 RIB, was planted on May 14, 2014 at a depth of 1.5 inches in 30 inch rows at a rate of 32,000 seeds per acre. A randomized complete block design was used with four replications. Preemergence (PRE) and postemergence (POST) treatments were applied with a tractor-mounted sprayer delivering 15 gpa at 40 psi using TTI 110015 spray tips .Evaluations of the plots were taken on June 2, 9, 16 and 24<sup>th</sup>. The center two rows of each plot were machine harvested on October 29, 2014. Application dates, environmental conditions, and weed stages can be found in Table 1. Performance ratings for giant ragweed control, common lambsquarters control, common waterhemp control, grass control, and crop injury can be found in Tables 2 through 6, respectively. (University of Minnesota Extension Regional Office, Rochester)
