

**Broadleaf weed control in spring wheat at Crookston, MN - 2005.** Durgan, Beverly R., Jochum Wiersma, Jim Cameron, and Douglas Miller. This experiment was designed to evaluate broadleaf herbicides for weed control and wheat injury . The experiment was conducted at Crookston, MN on a Donaldson and Wheaton loam soil. Following weedy fallow, the experimental area received 100 lb/A of N and was fall plowed. In the spring the experimental area was disked and harrowed. 'Alsen' hard red spring wheat was seeded on May 3 at 1.75 Bu/A. All herbicide treatments were applied with a backpack type sprayer delivering 10 gpa at 30 psi using 80015 flat fan nozzles. The experimental design was a randomized complete block with three replications and plot size was 10 by 24 ft. Application date and environmental conditions are listed below. Weed species present were Redroot Pigweed (AMARE), Common Lambsquarters (CHEAL), Common Mallow (MALNE), Wild Buckwheat (POLCO), Pennsylvania Smartweed (POLPY), and Wild Mustard (SINAR). Crop injury and weed control were visually rated and yields were measured. Data presented in the tables below.

Treatment Date	June 4
Target weed stage	2-4" weeds
Crop stage	4 - 4.5 Leaf
Air Temperature (° F)	71
Relative humidity (%)	77
Soil conditions	moist
Rainfall before Application	
Week 1 (inch)	0.47
Rainfall after Application	
Week 1 (inch)	1.40
Week 2 (inch)	2.39
<b><u>Redroot Pigweed (AMARE)</u></b>	
Population (#/ft <sup>2</sup> )	9
Stage	cotyledon
<b><u>Common Lambsquarters (CHEAL)</u></b>	
Population (#/ft <sup>2</sup> )	19
Stage	cot - 2 leaf
<b><u>Common Mallow (MALNE)</u></b>	
Population (#/ft <sup>2</sup> )	27
Stage	cot - 2 leaf
<b><u>Wild Buckwheat (POLCO)</u></b>	
Population (#/ft <sup>2</sup> )	37
Stage	cot - 2 leaf
<b><u>Pennsylvania Smartweed (POLPY)</u></b>	
Population (#/ft <sup>2</sup> )	9
Stage	cot - 2 leaf
<b><u>Wild Mustard (SINAR)</u></b>	
Population (#/ft <sup>2</sup> )	48
Stage	cot - 4 leaf
