

### **Hard red spring wheat and barley tolerance to postemergence herbicides at Rosemount,**

**MN - 2007.** Durgan, Beverly R., Krishona Martinson, and Douglas Miller. This experiment was designed to evaluate the tolerance of selected Hard Red Spring Wheat (HRSW) and barley varieties to various postemergence herbicides. The experiment was conducted at Rosemount, MN on a Waukegan silt loam soil. Following soybeans, the experimental area was chisel plowed in the fall of 2006. In the spring of 2007, the area received 75 lbs/A N then was field cultivated twice. The HRSW varieties 'Ada', 'Banton', 'Freyr', 'Glenn', 'Howard', 'Kelby', 'Knudson', 'Oklee', 'Steele-ND', 'Traverse', and 'Ulen' and the spring barley varieties 'Lacey' and 'Stellar' were seeded on April 25 at 85 lb/A and 90 lbs/A for HRSW and spring barley, respectively. Bromoxynil & MCPA at 0.25 & 0.25 lb ai/A was applied postemergence on June 1 to control broadleaf weeds. Herbicide treatments were applied to a 7.5 ft strip with a tractor mounted sprayer delivering 10 gpa at 35 psi using 11001 flat-fan nozzles. The experimental design was a strip plot with three replications. Varieties were seeded in strips randomized within each replication. Herbicide treatments were applied across all varieties. Each herbicide x variety plot was 12 feet wide by 12 feet long. Herbicide treatments were applied May 28. Environmental conditions at application are listed below. Crop injury was visually rated. Crop height and yields were measured. Data is summarized by variety and is presented in Tables 1 to 7.

**Treatment Date** **May 28**

Temperature (°F)

Air	80
