

## **Evaluation of Rimsulfuron and Nicosulfuron Programs Plus Mesotrione for Weed Control in Field Corn in 2009**

Breitenbach, Fritz R., Lisa M. Behnken, Ryan P. Miller, Sarah Stellpflug and Kyle Poss

The objective of this trial was to evaluate the performance of rimsulfuron and nicosulfuron programs plus mesotrione for weed control in field corn in southeastern Minnesota. The research site was a Lawler loam series with a pH of 6.8 and soil test P and K levels of 37 ppm and 115 ppm, respectively. Spring fertilizer was broadcast ahead of planting on April 17<sup>th</sup> at a rate of 126-35-120-24 (N-P-K-S). The area was side dressed with an additional 30 b/A of N on June 15. The field was spring disked and field cultivated once prior to planting. The corn hybrid, Pioneer 35F44, was planted on May 8<sup>th</sup>, 2009, at a depth of 1.5 inches in 30 inch rows at 35,000 seeds per acre. A randomized complete block design was used with four replications. Preemergence (PRE) and postemergence (POST) treatments were applied with a tractor-mounted sprayer delivering 20 gpa at 32 psi using Turbo Tee 11002 nozzles. Evaluations of the plots were taken on May 28, June 9, 16, and 24, and August 27. Application dates, environmental conditions, and weed stages are listed below. The center two rows of each plot were machine harvested on November 13, 2009. (University of Minnesota Extension Regional Office, Rochester, MN).

Date	5/8	6/4
<b>Treatment</b>	PRE	POST I
<b>Temperature (F)</b>		
Air	69	73
Soil	56	78.6
<b>Relative Humidity (%)</b>	35	17
<b>Wind (mph)</b>	7	8
<b>Soil Moisture</b>	Inadequate	Inadequate
<b>Corn</b>		
Stage		V4
Height (inch)	6	6
<b>Common Lambsquarters</b>		
Weed density (ft <sup>2</sup> )	12.4	
Height (inch)	3.1	2.4
<b>Common Waterhemp</b>		
Weed density (ft <sup>2</sup> )	1.4	
Height (inch)	1.8	1.5
<b>Grass</b>		
Weed density (ft <sup>2</sup> )	20.8	
Height (inch)	2.9	3.5
<b>Rainfall after each application</b>		
Week 1	0.61	1.76
Week 2	0	1.24
Week 3	1.95	0.15
