

## **Annual weed control with MON 63410 in soybeans at Lamberton, MN in 2009.**

Getting, Jodie K.

The objective of this study was to evaluate MON 63410 applied to V2 and V5 soybeans for annual grass and annual broadleaf weed control in glyphosate-resistant soybeans. This study was conducted on a Normania loam soil containing 4.2% organic matter, pH 6.1 and soil test P and K levels of 68 and 376 lb/A, respectively. A randomized complete block design with four replications and a plot size of 10 by 30 ft was used. The site was planted to oats in 2008 and was fall chiseled. On May 21, 2009, Asgrow 'AG 2107' glyphosate-resistant soybeans were planted into a stale seedbed that was field cultivated on April 15. Soybeans were planted in 30-inch rows at a seeding rate of 160,000 seeds/A. On July 29, all plots were treated with bifenthrin for soybean aphid and spider mite control. All treatments were applied with a tractor-mounted sprayer delivering 20 gpa at a pressure of 40 psi. The sprayer was equipped with 8002 flat-fan nozzles spaced 15 inches apart on the boom. Application dates, environmental conditions, plant sizes in the plots to be sprayed and rainfall data are listed below:

Date	May 21	June 15	July 1
Treatment	Burndown	POST I	POST II
Temperature (F)			
air	63	68	63
soil (4 inch)	68	64	70
Relative humidity (%)	42	64	68
Wind (mph)	NW 8	SE 7	N 10
Sky	cloudy	cloudy	clear
Soil moisture	dry	dry	dry
Soybean
