Herbicide performance in corn at Morris, MN - 1998. Jeffrey Gunsolus and George
Nelson The study site was in wheat in 1997. Fertilizer was applied at a rate of 140-4660 and fall chisel plowed under on October 23, 1997. The study was field cultivated on May $8^{\text {th }}$. Pre-Plant Incorporated treatments were applied as per plot plan on May14th and the entire study was field cultivated to incorporate the PPI's and prepare a seedbed.
Temperature was $70^{\circ} \mathrm{F}$ and the wind out of the south at 19 mph at spraying, the daily high was $89^{\circ} \mathrm{F}$. The study was seeded on May 14,1998 to Garst 8692 LL corn in 30 inch rows at 30,100 seeds per acre. Pre-emergence applications as per plot plan were applied on May $18^{\text {th }}$. The wind was out of the south at $3-5 \mathrm{mph}$ and temperature at $80^{\circ} \mathrm{F}$ at spraying , the daily high was $97^{\circ} \mathrm{F}$. Plots were shortened to 27.5 feet on May $28^{\text {th }}$. Postemergence applications at 2 collar, 3 collar, and 4 collar were applied on June $1^{\text {st }}$, wind out of the south at $15-22 \mathrm{mph}$ and temperature of $60^{\circ} \mathrm{F}$ with a daily high of $77^{\circ} \mathrm{F}$, June $4^{\text {th }}$, wind out of the west at $6-10 \mathrm{mph}$ and temperature of $50^{\circ} \mathrm{F}$ with a daily high of $63^{\circ} \mathrm{F}$, and June $8^{\text {th }}$, wind out of the east at $13-19 \mathrm{mph}$ and temperature of $55^{\circ} \mathrm{F}$ with a daily high of $65^{\circ} \mathrm{F}$, respectively. Treatments, as per plot plan, were row cultivated on June $22^{\text {nd }}$. The study was harvested with an Almaco plot combine on October $28^{\text {th }}$, grain moisture and weight were recorded. Harvest area was two 27.5 foot rows.

Table. Herbicide performance in corn at Morris, MN-1998. (Gunsolus and Nelson).

| Treatment | Rate | Weed Control |  |  |  | Corn |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
