

**Wild oat control with Puma, Discover, Assert, and Achieve alone and with**

**broadleaf herbicides at Crookston, MN - 2001.** Durgan, Beverly R., Jim Cameron, Douglas W. Miller and Krishona Martinson. The objective of this experiment was to evaluate wild oat control with Puma (fenoxaprop & safener), Assert (imazamethabenz), and Discover (clodinafop & safener) alone and in combination with several broadleaf herbicides. A second objective was to compare two formulations of Achieve (tralkoxydim). The experiment was conducted at Crookston, MN on a Donaldson and Wheaton loam soil. Following weedy fallow, the experimental area received 100 lb/A of N and was fall plowed. In the spring the experimental area was disked and harrowed. '2375' hard red spring wheat and 'Robust' Barley were seeded on May 14 at 1.5 and 1.75 Bu/A respectively. All herbicide treatments were applied with a backpack type sprayer delivering 10 gpa at 30 psi using 80015 flat fan nozzles. The experimental design was a randomized complete block with three replications and plot size was 10 by 16 ft. Application data and environmental conditions are listed below. Crop injury and wild oats control were visually. Wheat yields were measured. Barley yields were not measured due to heavy rainfall and subsequent stand damage. All data are presented in Tables 1 and 2 for barley and wheat, respectively.

Treatment Date	June 12
Target weed or crop stage	3-4 leaf Wioa
Barley Height (inch)	12
Wheat Height (inch)	10
Wild Oat	
Height (inch)	12
Leaf Stage	4
Air Temperature (degrees F.)	50
Relative Humidity (%)	56
Wind (mph)	calm
Cloud Cover	cloudy
Rainfall before Application	
Week 1 (inch)	0.28
Rainfall after Application	
Week 1 (inch)	0.73
Week 2 (inch)	0.13
